Saha, Sudipto	17-34582-2
Syed Sadat Ebne Mahmud	17-34648-2
Islam,Md.Rafiqul	17-34737-2

CART SYSTEM

Project Description:
Our project is called E-Cart system. It is a component of e-commerce website with over 60 features. The primary functionalities we have introduced are as follows:

Homepage
Here, the implementation is user-friendly for users such as customer login, sign up and message options. A search bar is there to assist the customers to search for product availability on the site and lets them to have a look on the product details. The navigation bar is used to show different categories, where features like View Today's deal, delivery areas and a blogging site. In the homepage the users can check out every available personalized items with pictures, price details, ratings and discounts. The site also includes a form where customer and fill in their emails to get updated whenever new products arrives.

Login & Signup
Here, customers can sign up and if already an account has can login to the system. For better security the passwords are double checked using confirm password; are also encrypted to password hashing. If a username is already taken that same username cannot be used on signup again.

Cart
Here, after logging in customers can view items with pictures, price details, ratings and discounts. As the customer will click add to cart option the products will be added to cart and the number of products added to cart will be viewed on the site. Remove button used if the customer wish to remove the product from the cart. The checkout button is included if user proceed for payment.

Check out
Here, the customer can view all the payment methods available. They can fill up the form with their details and amount of the product and can proceed to payment. The calculated subtotal amount of the items is also shown. After successful payment a message is popped.

Project Folder Structure:
htdocs folder
Final_Project folder : All the implemented php, json and text files are kept here. We have some subfolders on this folder such as:
1. css folder : is used to keep style.css and bootstrap.min.css which is used for describing the presentation of a document.
2. fonts folder : is used to keep files all the external fonts used on the project.
3. images folder: the pictures used for the project are kept here
4. js folder : is used to keep jquery-3.5.1.min.js and bootstrap.min.js. The JavaScript files of the project.

For links up:
At first **home.php** is loaded which is our homepage. On the search bar if a particular item name is search for then **productdetails.php** page is loaded to show product details**.** From hompage if sign up is clicked **signup.php** is loaded, and if login clicked **login.php** is loaded, also if E-Cart's response to COVID-19 is clicked the blogging site **covblog.php** is loaded. If the users logs in with valid username and password then, **cart1.php** is loaded. After adding items to cart if cart on the header is clicked **display.php** is loaded. When checkout button is clicked **Payment.php** is loaded. For payment option if bkash selected **bkash.php** is loaded.

Core Modules of the Project:
